

Installation Instructions for Body Double (X)

1/ Image and Equipment:

Projection distance to be determined regarding the video projector
Shortest distance and zoom at minimum are the best
(refer to user's manual)

Depending on the space configuration, the speakers are situated on each side of the screen and oriented towards the centre of the space.
Adjust the sound level accordingly before the opening, considering that any other piece may interfere with the sound of the film.

2/ Exhibition Space:

WALLS: painted black or dark grey

Instructions for painting a white screen on the wall:

- Set the image size and level the image
- Mark the 4 corners on the last lit pixel row of the projection
- Join the marks to obtain the frame
- Put some tape inside the frame (lit pixel area)
- Paint grey or black around the screen area

FLOOR:

Cover the floor with dark grey rug considering that this will improve the quality of the sound in the projection room.

SEATS:

Please dispose comfortable seats in the space.

If the space should look different, please contact Air de Paris.

3/ Settings Adjustment:

Check the tape/DVD before the opening. First, reset the projector to factory settings, then contrast and luminosity should be adjusted according to a specific scene located at 36 minutes of the beginning of the movie (see image 1). If the image looks too dark, it might be necessary to replace the bulb of the projector. The sound level should be adjusted according to the first scene of the movie (see image 2).
